

Seasonal cycle of ice-edge latitude ϕ_i
(variable H_{ml} , constant $F_b = 4.0$ m)

$$40.0 < H_{\text{ml}}(x, t) / \text{m} < 75.0, F_{\text{b}}(x, t) = 4.0 \text{ Wm}^{-2}$$

Surface enthalpy, E

Surface temperature, T

$$40.0 < H_{\text{ml}}(x, t) / \text{m} < 75.0, F_{\text{b}}(x, t) = 4.0 \text{ W m}^{-2}$$

$$40.0 < H_{\text{ml}}(x,t) / \text{m} < 75.0, F_{\text{b}}(x,t) = 4.0 \text{ Wm}^{-2}$$

$$40.0 < H_{\text{ml}}(x,t) / \text{m} < 75.0, F_{\text{b}}(x,t) = 4.0 \text{ W m}^{-2}$$
